CULTRAVISION

Abstract

Theyyam, a traditional art form of Kerala, holds significant cultural and religious importance. However, the preservation and recognition of this art are challenged by modernization and the lack of documentation. This project presents an innovative application that utilizes machine learning and deep learning techniques to recognize various Theyyam performances. By leveraging advanced image and video processing algorithms, the application accurately identifies different Theyyam forms and provides users with a brief description of each. This digital platform aims to preserve and promote Theyyam, making it more accessible to a broader audience, ensuring that this unique cultural heritage is recognized and appreciated in the digital age.
